Accelerate your upgrade of AX to Dynamics 365 and Operations with Korcomptenz

Our Specializations

Tailored data migration strategy to ensure that historical data can be queried reported and audited.

Save 40% on upgrade, migration, and integration costs with our unique methodology

Leverage our omnichannel expertise powered by intelligent order management and advanced warehouse management

Get better reporting with built-in Power BI capabilities

Elevate your systems for better financial performance and connected operations

Improve supply chain performance by identifying and implementing supply chain optimization solutions

Gain customer 360 and customer insights by integrating Dynamics 365 F&O with any CRM

Enhanced security and minimize mistakes through seamless payment integration with major banks

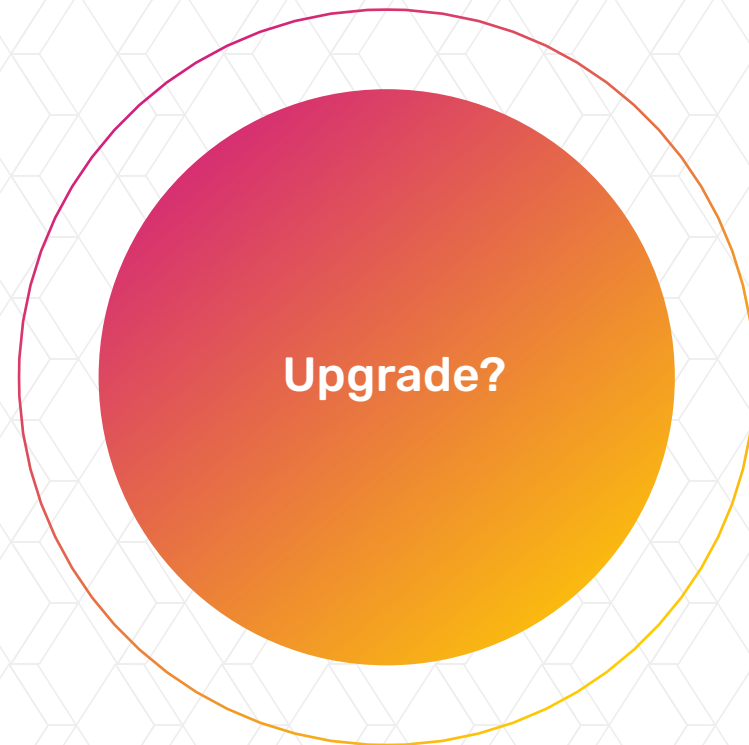

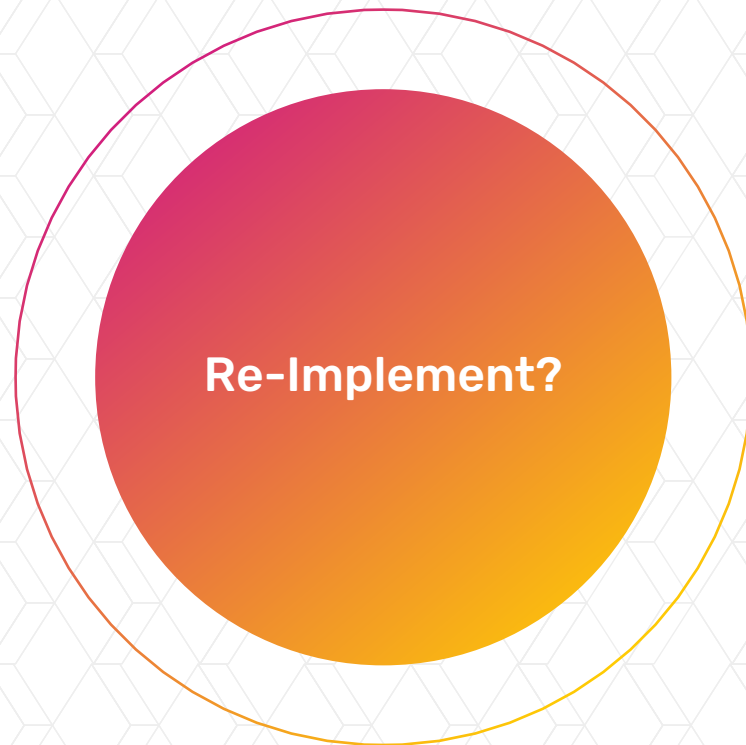

Integrate with Microsoft's AI/ML engine to get better forecasts.

Benefits of software upgrades by Microsoft, embracing emerging technologies

- Software upgrades by Microsoft introducing new features, embracing emerging technologies etc.
- Ability to use RPA with power automate
- Greater accessibility: D365 F&O is a cloud-based solution that provides greater flexibility, scalability, and accessibility.
- Cost reduction: D365 F&O reduces the cost of system ownership and licensing.
- More functionalities: Enhanced financial analytics and financial control, Improved supply chain features, rich and immersive analytics
- Improved flexibility: D365 F&O allows scaling services as and when needed.
- Built-in Power BI dashboards for Supplier performance, Inventory and warehouse operations, Cash flow, Financial analysis
- Increased security: D365 F&O secures critical data with improved security and privacy.
- Direct integration to Microsoft Excel for quick data entry and ad-hoc reporting: D365 F&O provides comprehensive tools for budgeting, forecasting, and financial planning. The system automates financial processes, reducing the chances of errors and ensuring compliance with financial regulations.

What are your options? And how do you choose?

Option 1 - Upgrade

What is the upgrade process?

Based on the version you are on currently the upgrade process is given below:

AX 2009

Upgrade from Dynamics AX 2009 to Dynamics 365 Finance and Operations

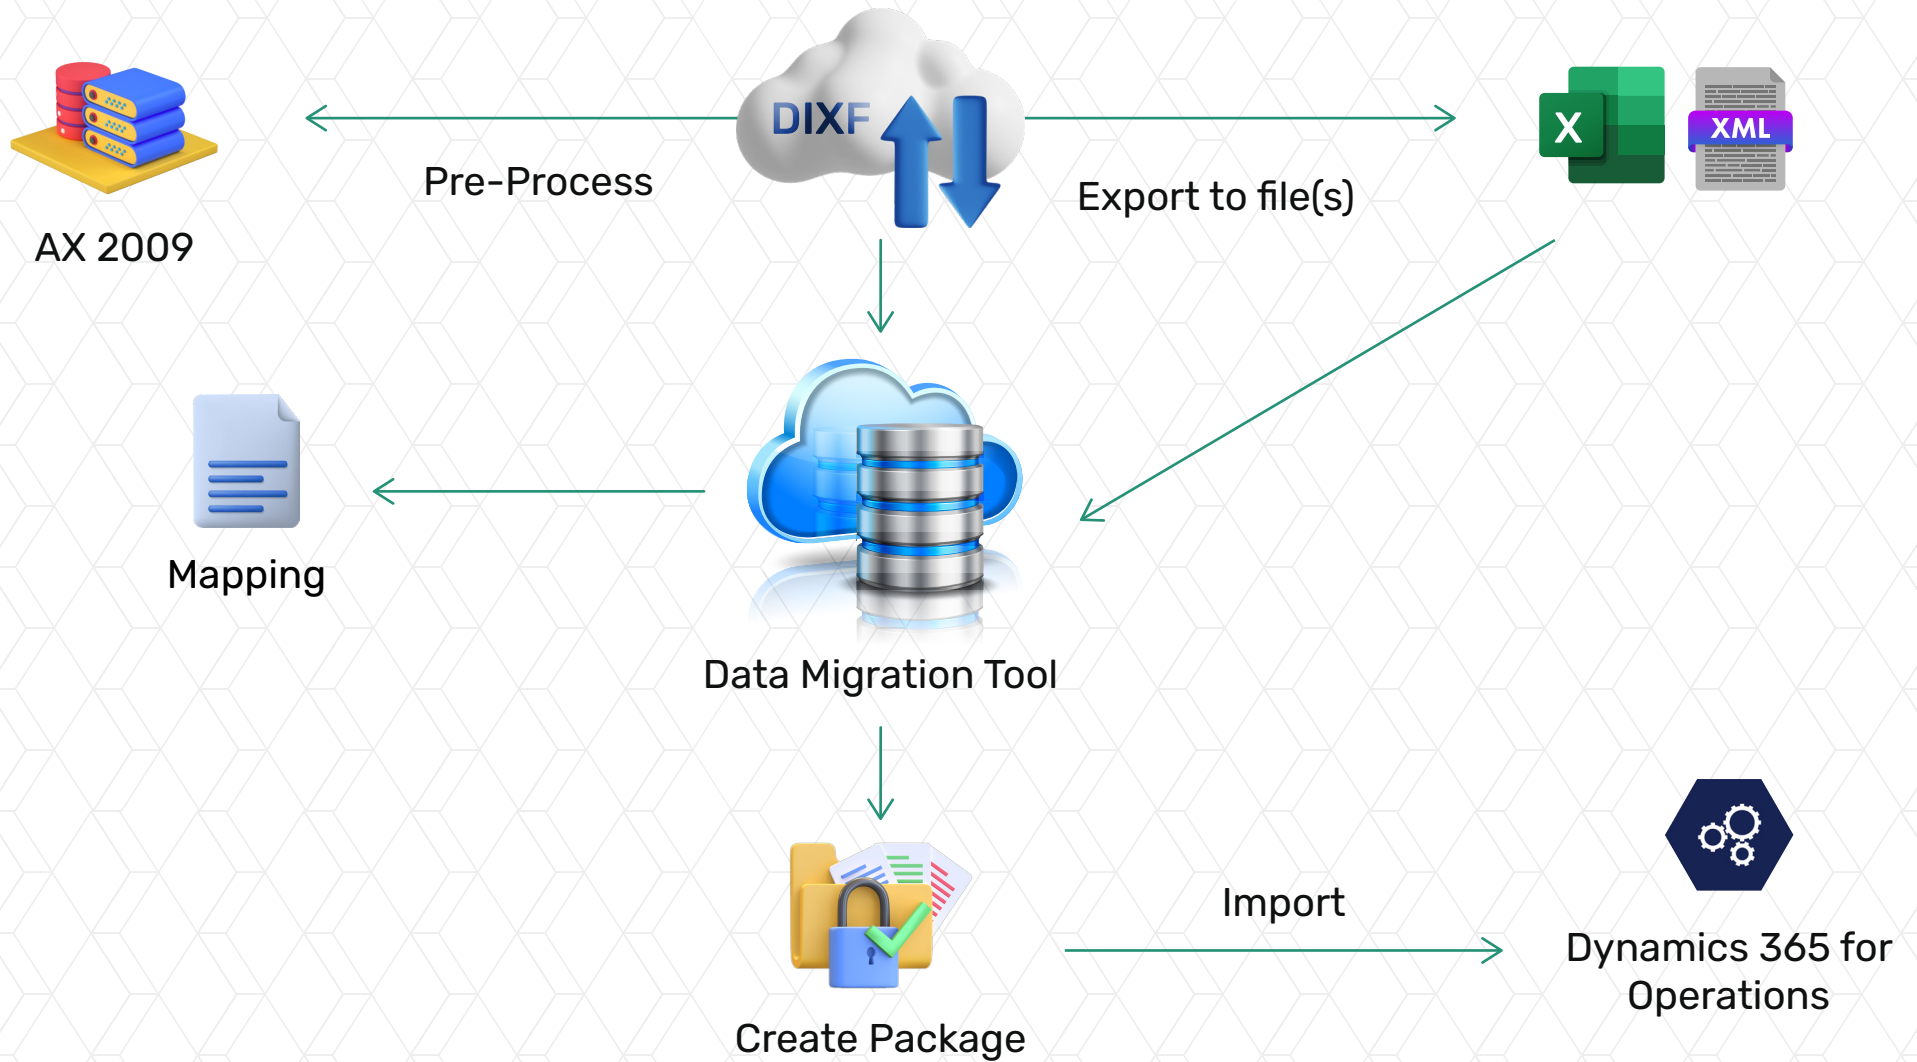

Data migration tool (DMT) is the only supported upgrade path from AX 2009 to Finance and Operations.

AX 2012

Upgrade from Dynamics AX 2012 to Dynamics 365 Finance and Operations

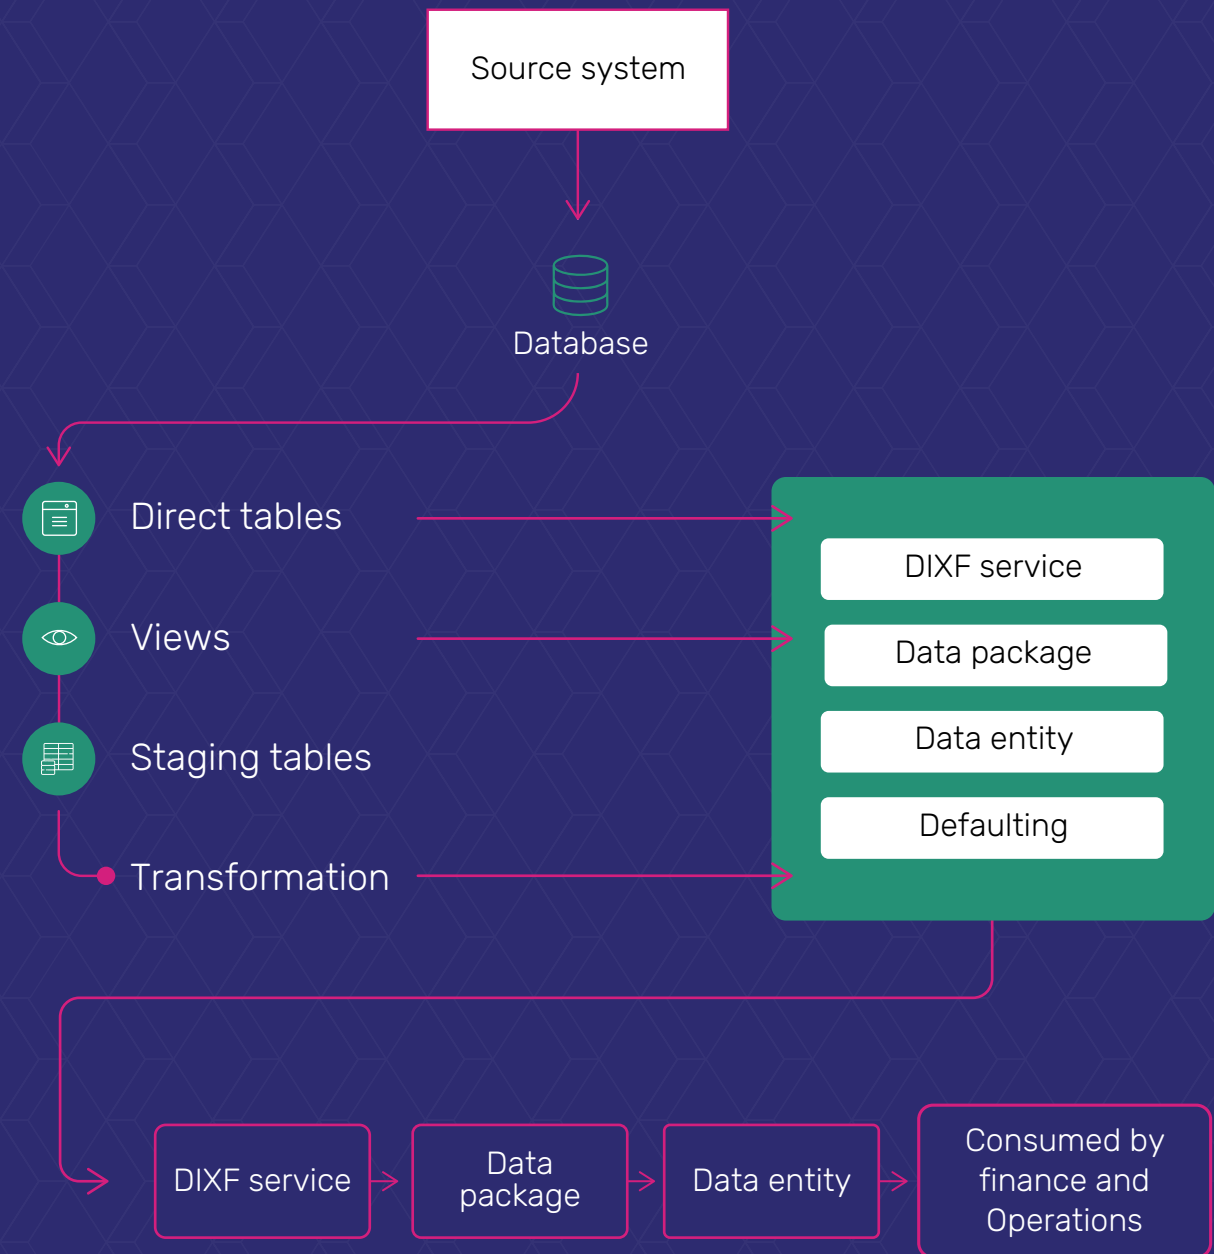

- Bring forward existing custom application code from AX 2012.
- Bring forward your database with a data upgrade process.
- Upgrade licensing code, and data

High-level process for Dynamics AX 2009

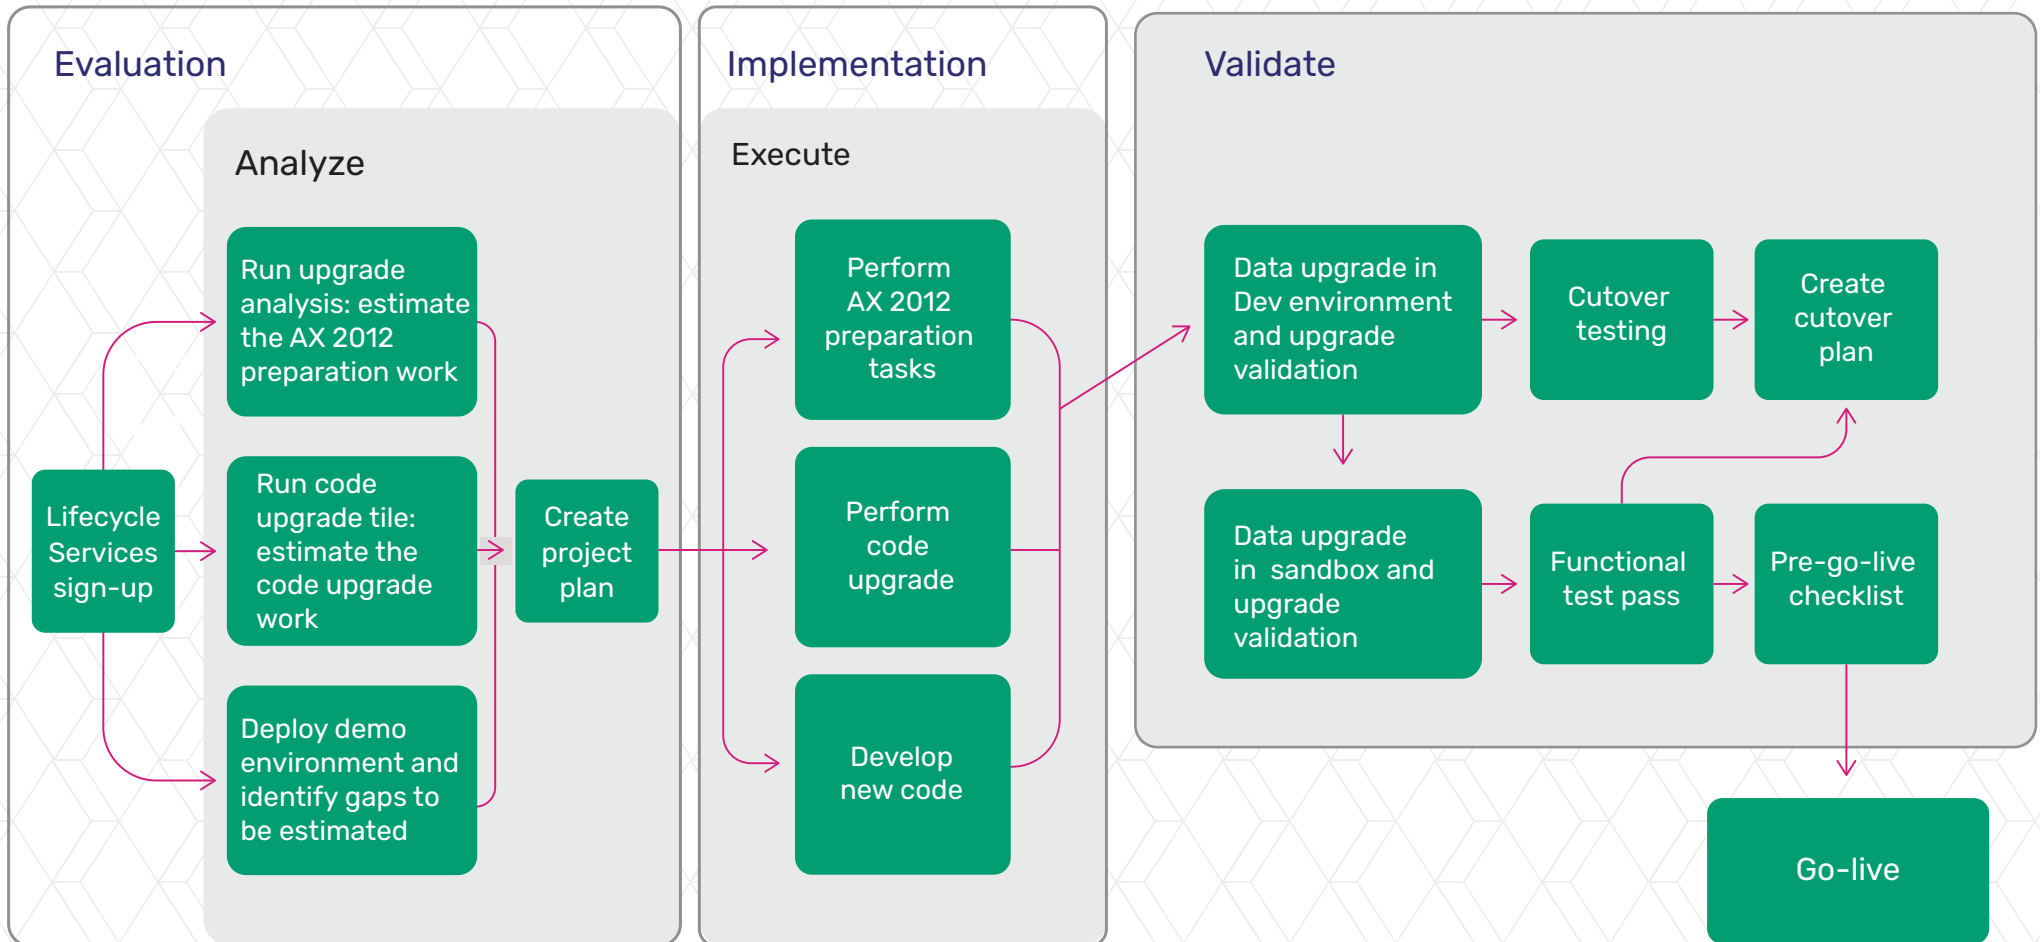

Technical Upgrade Process for Dynamics AX 2009

- AX 2009 to D365
- Technical Process flow

Process of Upgrade - AX2012 to D365

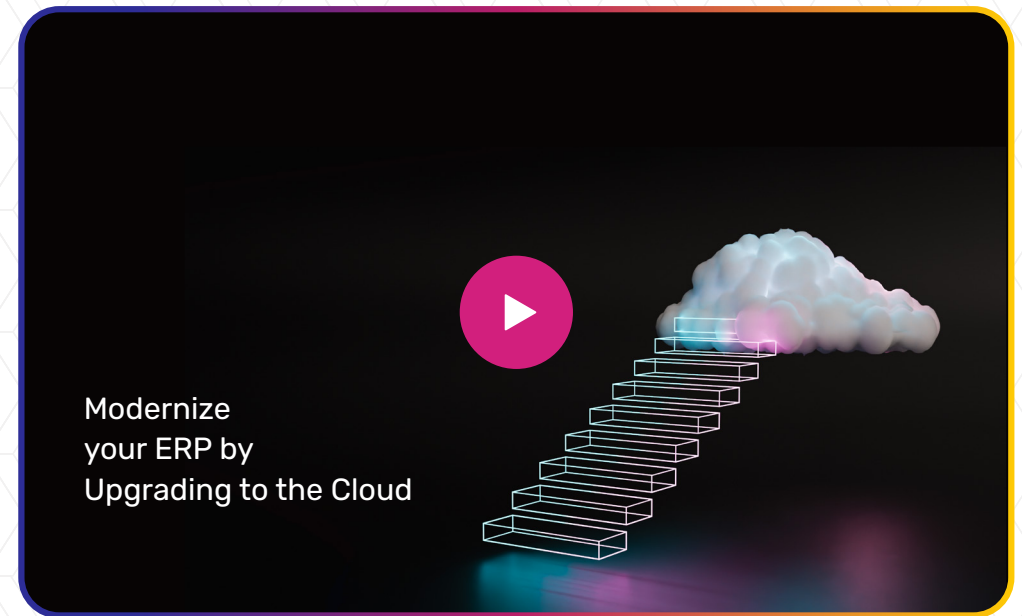

Why make the move to Dynamics 365 F&O in the Cloud ?

While some of you might be happy to stay on on-premises if you are considering moving to the Dynamics 365 Finance and Operations in the cloud watch our webinar to understand the benefits of the cloud offer.

Watch Webinar to learn about :

- Issues of on-prem ERP and benefits of moving to the Cloud
- Features of Microsoft Dynamics 365 Finance and Operations
- Demo of Dynamics 365 Finance and operations
- Demand Forecasting using Machine Learning
- How can Korcomptenz can help you in moving to the Cloud?

Why customers should care

Functionality, Services and Tools	AX 2009 and 4.0	AX 2012	AX 2012 R2	AX 2012 R3	Dynamics 365
New end user experience with enhanced UI					
Reduce customizations (up to 40%) due to added functionality. (e.g. WMS, TSM, Retail)					
Code* and Data migration tools					n/a
Reduce hardware upgrade costs and IT maintenance					
Predictable and repeatable implementations across your organization					
Platform flexibility and elasticity					
Intrusion security, high availability and disaster recovery					
Mobile-ready and access anywhere with cross-platform UI support					
Seamless integration with productivity tools					
Built in BI tools with real-time data insights					

Note: This table provides only a graphical representation.
For detailed functionality please refer to the product guide* Code update only available for AX2012 deployments

Transition at a Discount

Special offer for Dynamics 365 in the Cloud

- Offer valid till June 30th 2022.
- Talk to our Licensing specialist and optimize your usage and savings

	Current License	Dynamics 365 Finance and Supply Chain Management	Transition Promo Cost <small>* For Customers on AX 2009/2012, and paying AMC promptly every year</small>
On-Premises	Dynamics Base License Full User Finance/SCM/Commerce	\$180 ^{.00} USD/USER/MONTH	\$120 ^{.00} USD/USER/MONTH
	Dynamics Attach License FULL User Finance/SCM/Commerce	\$30 ^{.00} USD/ATTACH/MONTH	\$18 ^{.00} USD/ATTACH/MONTH
		On Cloud	

Option 2 - **Re-implementation**

When should I consider re-implementation and is it worth it?

Re-implementation is nothing more than a new implementation where instead of migrating all your data from older versions of Dynamics AX to Dynamics 365, you implement Dynamics 365 Finance and Operations as a new application and just migrate the data like master data and opening balances etc.

The outcome of a reimplementation is a more relevant, nimble and modern system, and that allows for easier adoption of new features part of Microsoft's continuous upgrades.

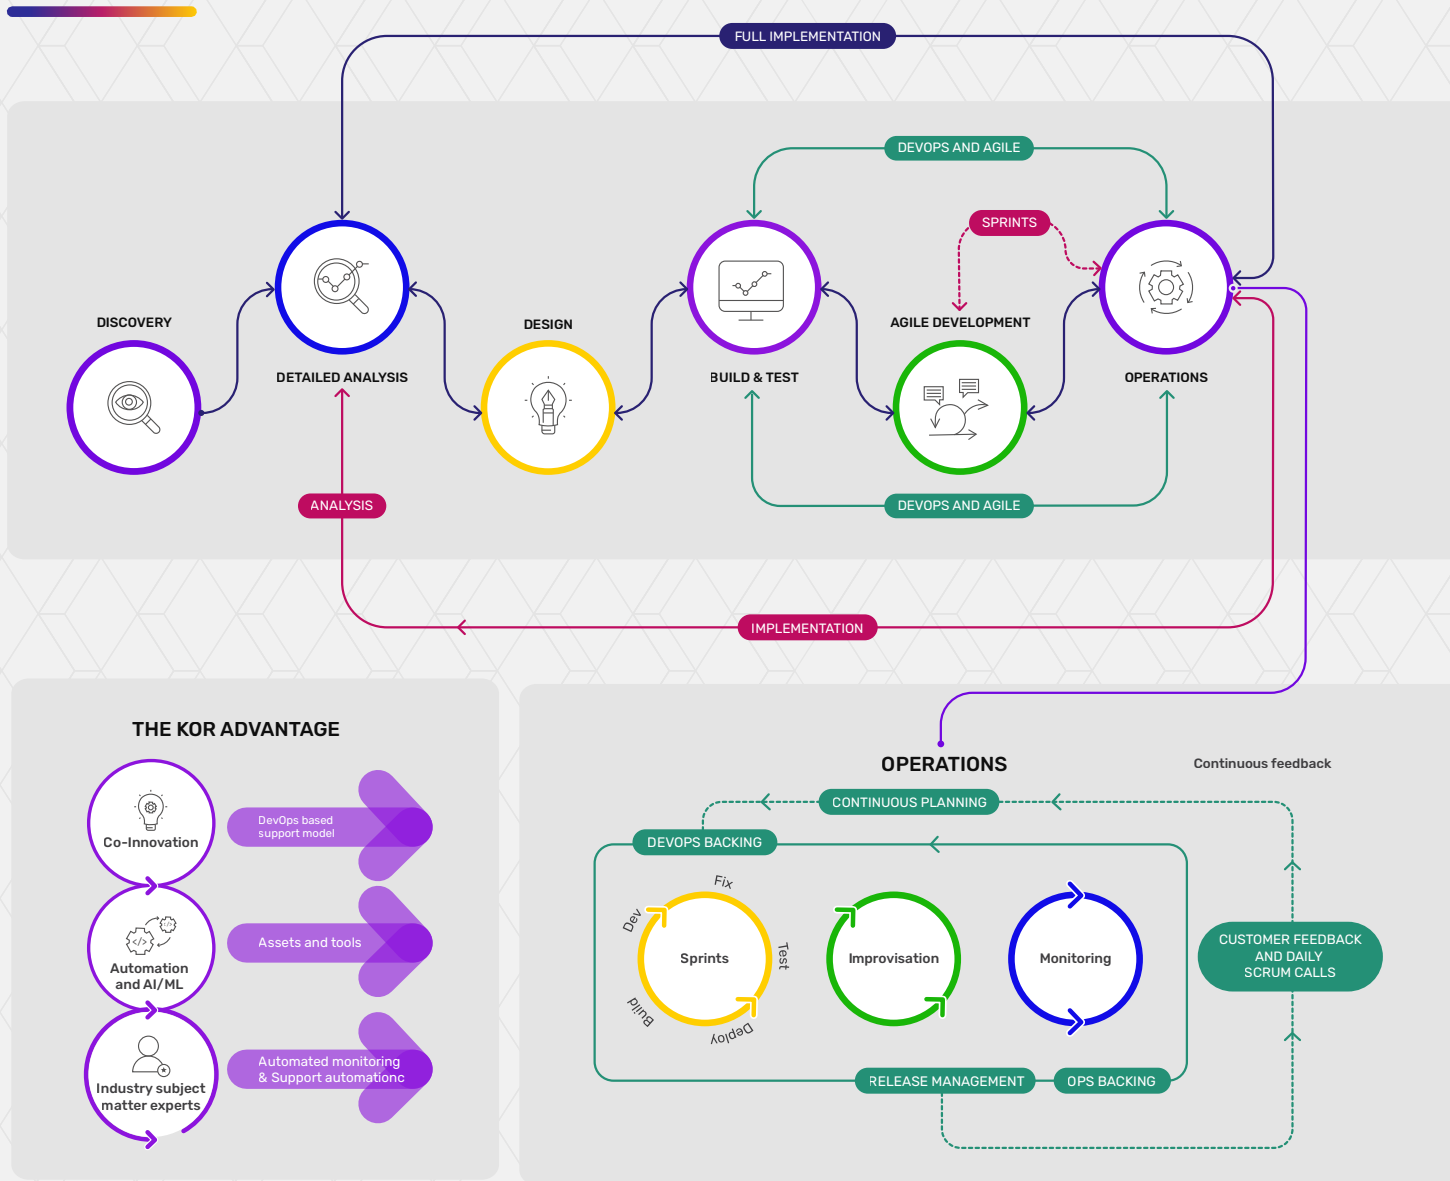

- Re-assess your existing processes and only take the data and customizations you need.
- Allows you to do away with unnecessary customizations.
- Gives you better functionality as just upgrading would restrict some of the functionality which Dynamics 365 offers as some of your old data and customizations might not be supported in the new version.

A Re-implementation is the best choice in this scenario as it will help to change the current outdated process setup and add new and better functionality. But a re-implementation should be considered only when an upgrade/migration is not feasible.

Pros and Cons of Re-implementation

Pros	Cons
<p>If your AX implementation is not providing the desired results or your business has gone through a major process changes, automations etc. re-implementation is a beautiful opportunity to revisit your business processes, automation requirements etc. and implement a neat system for your use</p>	<p>Re-implementation is time consuming and costly. One way it helps redesigning process and documenting the same</p>
<p>Some of the customizations you have done in AX may be available as standard features, integrations with 3rd party applications can be done using standard connectors or better methods of integrations provided by Microsoft.</p>	<p>Loss of transactional data. For some it may be good but old data can be moved to a Data Warehouse and reports can be generated with the current data.</p>
<p>New enhancements and additional features available in D365 will eliminate some of the manual processes or done through other applications</p>	<p>It's time-consuming and expensive. Typically, this approach takes more consulting power to redesign processes, configure the new system, unit test, write specifications and so on.</p>

Our Unique Sure Step Methodology with Microsoft Dynamics 365 is designed with a #FocusOnYou

This diagram highlights the steps that need to be followed to move your Dynamics AX Applications to Dynamics 365 Finance and Operations with re-implementation.

Korcomptenz' s unique methodology ensures that you save 40% on all your implementation and support projects.

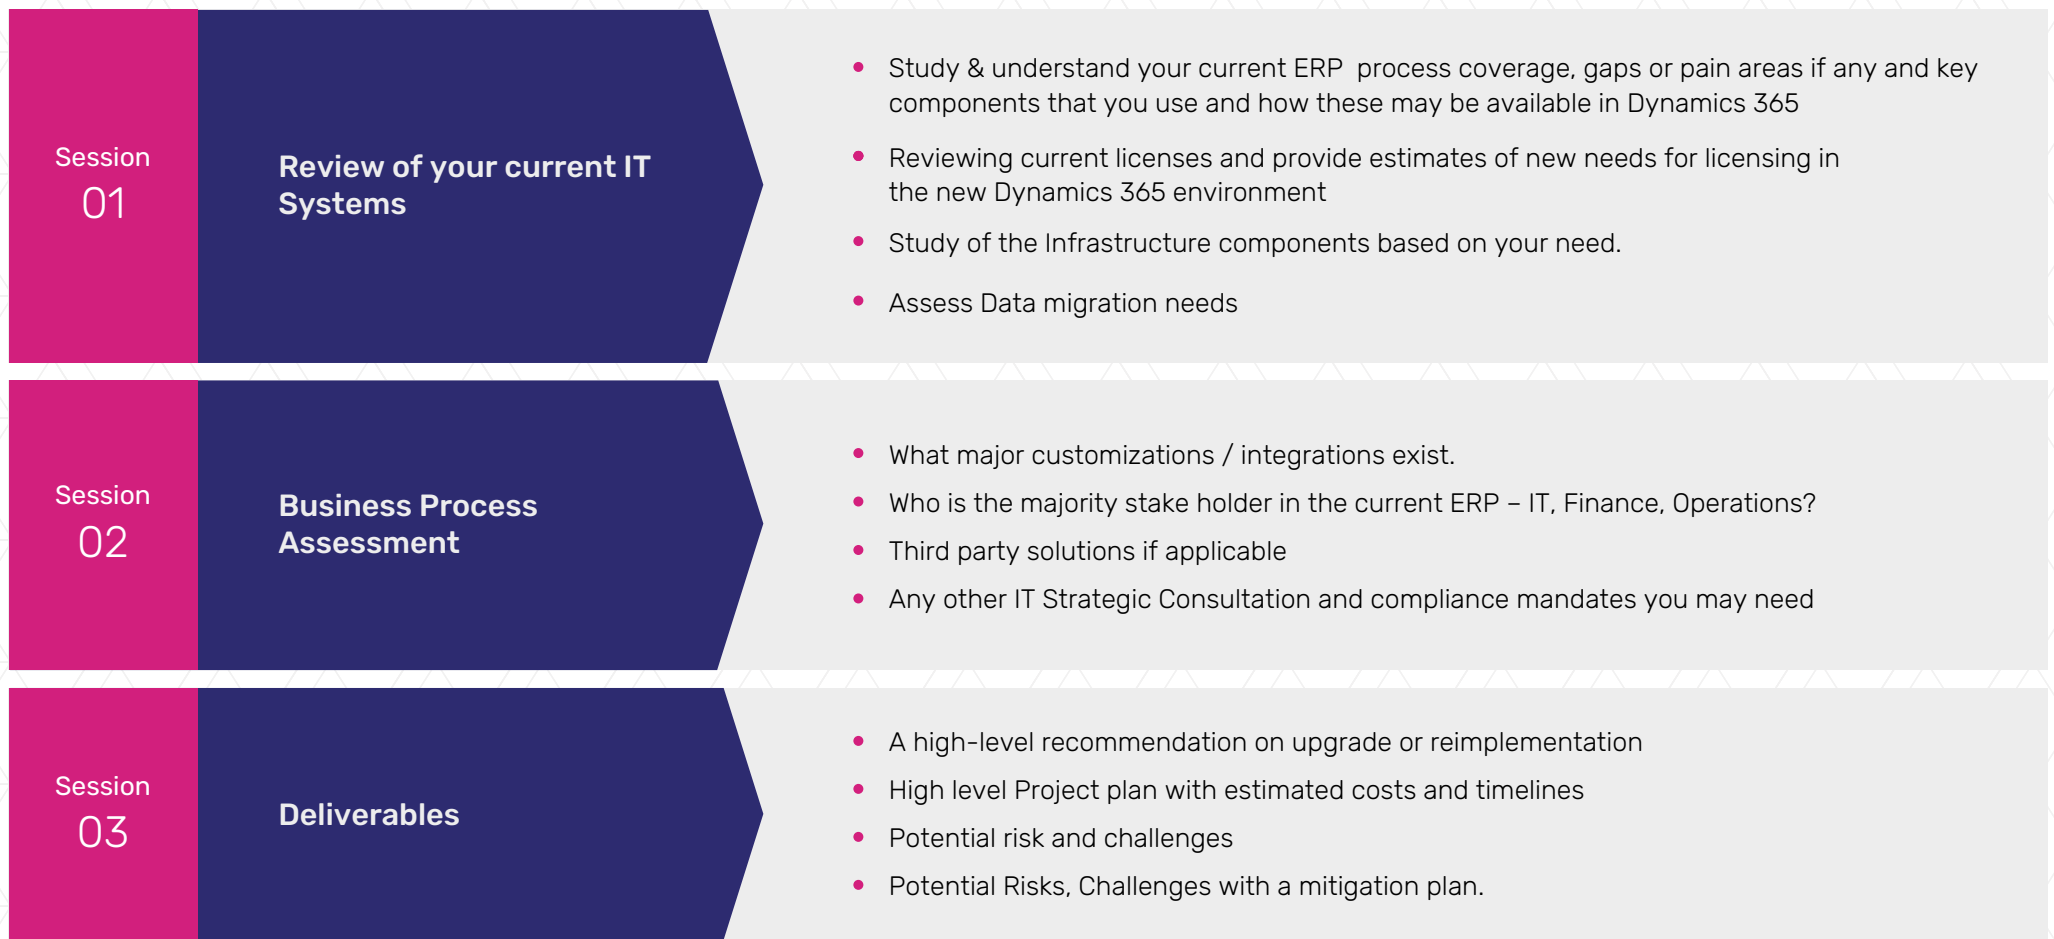

Still confused on which option to choose? Consult our experts
and avail our complimentary assessment

Complimentary Assessment

The project implementation can take from 6 months to 8 months depending on the requirement. Request a consultation for a detailed discussion.

While helping many of our customers with the question of reimplementation or upgrade we found they had many concerns or questions. [Check out our FAQ's](#) to find out what they are.

Note: An on-site assessment will incur additional charges
